No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                       Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents human PRO344 (UNQ303), a protein encoded by the novel cDNA clone DNA40592 (see AAX87258). Amplification of DNA40592 was observed in primary lung tumours and in primary colon tumours, suggesting a significant role in tumour formation and growth. Antagonists (e.g. antibodies) directed to PRO344 may have use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX06477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of tumour treatment. This polypeptide comprises human adipocyte-specific protein zsig39, a protein that modulates free fatty acid metabolism. zsig39 is a member of a family of proteins having a globular domain and a collagen-like domain capable of dimerisation or oligomerisation. zsig39 polypeptides were initially identified by querying an EST

                                                                                                                                                                                                                                                                                                                                                                                                                                                           methionine start site, a hydrophobic region of approximately 13 cd amino acids and a cleavage site. A single EST sequence was discovered, and the novel polypeptide encoded by the full-length CDNA allowed the identification of a homologue relationship with adipocyte complement related protein Acrp30 and adipocyte secreted protein apM1. A full-length clone (see AAX24684) was obtained from a lung tissue library. Expression vectors, cultured cells and a method of producing zsig39 polypeptide are claimed, as well as complement related protein affinity tags, toxins, radionucleotides, enzymes or fluorophores, fusion proteins including zsig39 polypeptides, an antibody that specifically binds to an epitope of zsig39, and a method for modulating free fatty acid metabolism by administering a zsig39 polypeptide. The czsig39 polypeptide may also be used in organ preservation, for cryopreservation, for surgical pretreatment to prevent injury due to ischaemia and/or inflammation, and as an antimicrobial agent, recomplement in production and a polypeptide or phagocytosis of infectious agents.

be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are selected from systemic lupus erythematous, rheumatoid arthritis, escleroarthritis, juvenile chronic arthritis, spondyloarthropathies, systemic sclerosis, idiopathic inflammatory myopathies, Systemic sclerosis, idiopathic, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaemia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune or immune-mediated skin diseases, allergic diseases,

It is isolated from human foetal lung tissue, cDNA library, identified using probes based on a consensus sequence DNA34398, derived from secreted protein extracellular domain (ECD) expressed sequence tag (EST). This clone is assigned ATCC deposit No: 209492. PRO344 functions as a nephastic cell growth inhibitor and the process of the control of the

```
The present sequence represents a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO346, PRO349, PRO347, PRO357, PRO317, PRO317, PRO509, PRO343, and PRO682. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New anti-polypeptide antibody useful in the treatment neoplastic cell growth and proliferation -

                                                                                                   polypeptides which are designated as PRO polypeptides are described The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources.
                                                                                                                                                                                                                                                                                                             New human nucleic acids encoding secreted and transmembrane polypeptides, designated as PRO polypeptides, useful as pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-DEC-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PRO; membrane bound protein; secreted protein; PRO357; PRO327; PRO243; PRO715; PRO241; PRO323; PRO299; PRO233; PRO344; PRO347; PRO355; PRO353; PRO361; PRO365; transmembrane polypeptide; antibody; screening; detection; inhibition; probe; primer; human.

Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (GETH ) GENENTECH INC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12172-AAU12446 represent novel human secretory and transmembrane polypeptides. The PRO polypeptides are useful to detect other polypeptides, to link bioactive molecules to cells expressing polypeptides, to modulate biological activities of cells expressing polypeptides, and to detect the presence of mammalian lung, colon,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      lated, secretory and transmembrane PRO polypeptide used to detect
er PRO polypeptides, link bloactive molecules to cells expressing
phlypeptides, and detect the presence of mammalian tumours e.g.
g, breast, prostate, cervical
                                                                                                                                                                                                         241
                                                                                                                                                                            241
                                                                                                                                                                                                                                         181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       located on human chromosome 16. zacrp5 gene and protein are useful for diagnosting and treating inflammations, for determining arterial remodelling, for modulating calcium ion concentration, hormone secretion, DNA synthesis or cell growth, inositol phosphate turnover, arachidonate release, phospholipase C activation, gastric emptying, human eutrophil activation or ADCC capability and superoxide anion producting acrp5 gene and protein are also useful as antimicrobial applications, preferably against bacteria and virus, for complement inhibition, for treating acute vascular injury, and for wound healing. The present sequence is human adipocyte complement related protein homolog, zaig39 protein. This protein was used in a sequence homology alignment with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to human adipocyte complement related protein homolog, zacrp5 protein and coding sequence (see AAB49590 a) AAC90045). ZACRP5 has a carboxyl-terminal C1q domain. The zacrp5 generates the contract of the contra
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel adipocyte complement related protein homolog,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              adipocyte complement related protein homolog; inflammation; hormone secretion; inositol phosphate; arachidonate; phospholipase C activation; gastric emptying; neutrophil activation; superoxide anion production; antimicrobial; acute vascular injury;

remodelling, for modulating calcium ion concentration, hormone secretion, DNA synthesis or cell growth, inositol phosphate turnover, arrachidonate release, phospholipase C activation, gastric emptying, hum neutrophil activation or ADCC capability and superoxide anion production zacrp6 gene and protein are also useful as antimicrobial applications, preferably against bacteria and virus, for complement inhibition, for treating acute vascular injury, disseminated intravascular coagulation, arteriosclerosis and for wound healing. The present sequence is human adipocyte complement related protein homolog zsig39. This protein was used in a sequence homology comparison with ZACRP6 protein.
                                                                                                                                                                                                                                                                                                                                                       Novel adipocyte complement related protein homolog, ZACRP6, useful as modulators of neurotransmission and for treating disseminated intravascular coagulation, arteriosclerosis and acute vascular injury

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides the protein and coding sequences of the human and murinę secreted or transmembrane proteins TANGO 253, TANGO 25 TANGO 281 and INTERCEPT 258. These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.

These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.

These are useful in the treatment of coronary, pulmonary, olfactory, immunological, neurological, developmental and kidney disorders.
